

Etiga IT Solutions Website Deployment Guide

From Website Development to Live Website (Hostinger + GoDaddy)

Project Name: Etiga IT Solutions

Website: <https://etigait.in>

Hosting Provider: Hostinger

Domain Provider: GoDaddy

Website Deployment Process

Overview

This document explains the complete deployment process followed to make the **Etiga IT Solutions** website live on the internet. It covers every step from developing the website to successfully connecting the GoDaddy domain with Hostinger hosting.

Architecture Overview

Website Live
<https://etigait.in>

Step 1: Develop the Website

Create the complete website using HTML, CSS, JavaScript, or any frontend framework.

Project Structure

```
EtigaIT/  
|  
├─ index.html  
├─ css/  
│   └─ style.css  
├─ js/  
│   └─ script.js  
├─ images/  
└─ assets/
```

After testing locally, verify:

- Responsive Design
 - Navigation
 - Images
 - Contact Form
 - Mobile Compatibility
 - Browser Compatibility
-

Step 2: Purchase Hosting

Purchase a hosting plan from **Hostinger**.

After purchasing:

- Login to Hostinger
- Open hPanel
- Hosting account becomes active

Step 3: Purchase Domain

Purchase the required domain from **GoDaddy**.

Example:

etigait.in

The domain will now appear inside your GoDaddy account.

Step 4: Add Website to Hostinger

Inside Hostinger

Websites
↓
Add Website

Choose

Upload Existing Website

Step 5: Upload Website Files

Compress the project folder into ZIP format.

Example

EtigaIT.zip

Upload using

Hostinger File Manager

OR

FTP (FileZilla)

Upload into

public_html

Extract the ZIP file.

After extraction

```
public_html/  
  
index.html  
css/  
js/  
images/  
assets/
```

Delete the ZIP file after extraction.

Step 6: Connect GoDaddy Domain

Login to GoDaddy.

Select

Domains

Open

etigait.in

Go to

DNS Management

Choose

Nameservers

Select

Custom Nameservers

Enter Hostinger nameservers:

ns1.dns-parking.com

ns2.dns-parking.com

Save changes.

Step 7: Wait for DNS Propagation

After changing the nameservers:

- Minimum: 30 minutes
- Usually: 2–6 hours
- Maximum: 24–48 hours

During this period, the website may work for some users before others because DNS changes propagate gradually.

Step 8: Verify Domain Connection

In Hostinger

Websites

Check whether the domain status is:

Connected

If connected, the domain is successfully pointing to Hostinger.

Step 9: Enable SSL Certificate

In Hostinger

Security

Open

SSL

Choose

Install SSL

Select

Free SSL

After installation:

<https://etigait.in>

will display a secure padlock icon in the browser.

Step 10: Force HTTPS

Navigate to

Hostinger

↓

SSL

↓

Force HTTPS

Enable it.

This automatically redirects:

`http://etigait.in`

to

`https://etigait.in`

Step 11: Test the Website

Verify:

- ✓ Homepage loads correctly
- ✓ Navigation menu works
- ✓ Images display correctly
- ✓ CSS styling loads
- ✓ JavaScript functions correctly
- ✓ Mobile responsive layout
- ✓ Contact form works
- ✓ HTTPS enabled
- ✓ No broken links

Step 12: Search the Website Online

Open a browser and search:

Etiga IT Solutions

or directly visit

<https://etigait.in>

If everything is configured correctly, the website will load successfully.

Deployment Flow

Technologies Used

Component	Technology
Frontend	HTML5
Styling	CSS3
Programming	JavaScript
Hosting	Hostinger
Domain Registrar	GoDaddy
SSL	Let's Encrypt (Free SSL via Hostinger)
Deployment	Hostinger File Manager / FTP

Final Outcome

The **Etiga IT Solutions** website was successfully:

- Developed using HTML, CSS, and JavaScript.
- Hosted on Hostinger.
- Connected to the **etigait.in** domain purchased from GoDaddy.
- Secured with HTTPS using a free SSL certificate.
- Made publicly accessible on the internet.

Live Website: <https://etigait.in>

Conclusion

By following the above process, the Etiga IT Solutions website was successfully deployed from local development to a production environment. Hostinger provides the hosting infrastructure, while GoDaddy manages the domain registration. After configuring the nameservers, uploading the website files, enabling SSL, and waiting for DNS propagation, the website became fully accessible on the internet through **https://etigait.in**.
